

Complex Worlds from Simpler Nervous Systems (Hardback)

By -

MIT Press Ltd, United States, 2004. Hardback. Book Condition: New. New.. 231 x 178 mm. Language: English . Brand New Book. The authors of Complex Worlds from Simpler Nervous Systems explain how animals with small, often minuscule, nervous systems -- jumping spiders, bees, praying mantids, toads, and others -- are not the simple reflex machines they were once thought to be. Because these animals live in the same world as do much larger species, they must meet the same environmental challenges. They do so by constructing complex perceptual worlds within which they can weigh options, make decisions, integrate unique experiences, apply complex algorithms, and execute plans -- and they must do this with thousands rather than the billions of neurons necessary for their larger counterparts. The authors of each chapter, leading neuroscientists and animal behaviorists, present their research in ways that allow the reader to understand this process from the animal's perspective. The first of the book's three parts, Creating Visual Worlds: Using Abstract Representations and Algorithms, examines the visual worlds of jumping spiders, honeybees, praying mantids, and toads. Part II, Enhancing the Visual Basics: Using Color and Polarization, explores color vision and light polarization perception in honeybees, butterflies,...

Reviews

Simply no words to explain. It really is basic but shocks from the fifty percent of the ebook. I am just happy to explain how this is the finest pdf we have read within my personal life and could be the best ebook for possibly.

-- **Blair Monahan**

It is one of the best publications. It is definitely simplistic but excitement in the 50% in the ebook. I am very happy to let you know that this is basically the greatest publication I have got to go through within my own existence and could be the greatest pdf for ever.
