

## Mathematical Questions and Solutions in Continuation of the Mathematical Columns of The Educational Times Volume 62

Filesize: 7.04 MB

### **Reviews**

*This publication is very gripping and exciting. Better then never, though i am quite late in start reading this one. I am very happy to inform you that here is the finest pdf i actually have read inside my very own daily life and could be he greatest publication for actually.*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: .Professor Bhattacharya; and others. Taking OP for initial line, let  $POQ = 8$ ,  $QOR = p$ ; then the sides of the triangle, and area  $S$ , can be immediately obtained. We require the average value then 12284. (R-Chartres.)--BC is a fixed chord of a circle subtending an angle of  $120^\circ$  at the centre  $O$ : show that (1) for any position of  $A$  on the larger arc the ortho-centre, in-centre, circum-centre, Fermat's point, and another point  $Z$  of the triangle  $ABC$  lie on the arc  $BOC$ ; also find (2)  $Z$ , the isogonal conjugate of  $Z$ , and the value of  $2(ZA) \cdot 2(ZA)$ , without restricting  $A$  to the circle; and (3) the locus of the centre of the nine-point circle in (1), and, if the involute of this curve roll on a straight line, find the locus of the mid-point of  $BC$ . Solution by Professor Longchamps; the Proposer; and others.  $BC$  subtends at the ortho-centre, in-centre, circum-centre, Fermat's point  $F$ , and its isogonal conjugate  $Z$ ,  $180-A$ ,  $90 + iA$ ,  $2A$ ,  $120$ , and  $A + 60$ , each of which =  $120$ , if  $A = 60$ . By the similar triangles  $AZB$ ,  $AKC$ ,  $ZA/c = 4/AK$ , or  $ZA \cdot s(FA) = 4e$ ;  $-S(ZA) \cdot 2(FA) = 2(-4)$ . Since the radius of the nine-point circle =  $R = OD = \text{constant}$ , therefore the locus of its centre is the circle having  $ODH$  for diameter. If the involute of this circle roll on a straight line  $LM$ , then  $LM$  equals sub-normal of the roulette described...
