GRIN Verlag Jan 2014, 2014. Taschenbuch. Book Condition: Neu. 210x148x2 mm. This item is printed on demand - Print on Demand Neuware - Research paper from the year 2012 in the subject Medicine - Medical Frontiers and Special Areas, grade: 4 on 4 scale (A), , language: English, abstract: Recently, much scientific interest has been converging on writing and reading comprehension skills. Knowing that multivariate analysis of variance and covariance are often used to test for differences among two, three or more means without increasing the risk of Type I errors, the aim of this analysis was to compare the ability to perform different reading and writing activities that are related to the students' use of memory, senses, and observation. The database used provided the results of a survey of 303 students on their reading and writing abilities. The overall research question was as follows: In which of the three ability groups (i.e., low, medium, or high) did college students have the highest reading and/or writing abilities In Chapter I of this paper, the study design and descriptive statistics are reviewed. Chapter II simplifies the concept of formulating research questions and hypotheses, and a series of t-tests are carried out to support the findings of multivariate analyses. Chapter III presents the results of MANOVA and MANCOVA employed to answer the research questions. In Chapter IV, the findings are synthesized and discussed, whereas in Chapter V, the conclusions draws are summarized. Obviously, this sample revealed that the students' ability group had a significant effect on their reading comprehension, ability to copy words, composition, and writing words, i.e., those in the high ability group showed higher reading comprehension and ability to writing words than their counterparts in low or average ability groups, and those in the high ability group had significantly higher...
